Kitchen accessibility in the home

Functional kitchen design is important for anyone, but particularly for individuals living with the challenges of aging and disability. BILD offers the expertise of design experts and Occupational/Physical Therapists who understand function and safety, and can assist in knowing the options for creating a beautiful and functional space.

Individualized measurements:

More important than products for any accessibility project is the importance of customizing and tailoring adaptations to your individual needs, abilities and dimensions. Any accessibility project is dependent on these details, especially work in the kitchen – therefore it is of great benefit to work with an accessible design specialist knowledgeable in the aspects thereof.

Shelving and storage options:

Today, there is a great deal of storage and shelving that provides easy access to maximize use and function of space within the kitchen from a limited standpoint. Much of the pull out shelving for lower cabinets feature hardware which provides good use of space, self-closing mechanisms for ease of use, and easy-to-operate pull out and lift up options for lower and upper cabinets.

In addition to manual lowering options, there are motorized options available both for shelving as well as countertop spaces:

Countertops, cabinetry, and space planning:

Space, cabinetry, and layout are very customizable for space planning to fit individual needs and setup:

Considerations & concerns for kitchen appliances:

- Consider side-by-side refrigerator with pull out shelving for easier access.
- Look for appliances with front controls that are easy to manage.
- Consider wall ovens that provide side opening doors.
- Consider induction stove top technology providing a safer stovetop surface.
- Utilize looped pulls that are easy to manage and manipulate, or push to open/push to close drawer/cabinets.
- Keep in mind "toe-kick" foot clearance for increased maneuverability.
- Utilize sink fixtures that are easy to reach and consider sink fixtures that can extend over the stove top or counter top.
- Consider wheelchair modifications such as use of seat elevator to provide easier access to higher shelving and appliances.

BILD is the premier provider of accessible modifications and safe handling transfer and exercise assist technology for homes and facilities. We offer the expertise of national educators on transfer and exercise lift technology.
