Whole home
solutions

People are healthier and happier when they can stay safely in their own home.

That's our mission — to make that possible for you.

We are BILD Accessibility Specialists.

We offer a full 360° range of home accessibility solutions of every kind: from remodeling and design to equipment rental and purchase. Our multidisciplinary team - of physical and occupational therapists, assistive technology providers, accessibility consultants, designers, technicians, and skilled carpenters - brings you a holistic approach to accessibility. And we're proud to be recognized leaders in the field.

Whether you're navigating limited mobility, disability-related challenges, caregiver responsibilities or aging-related needs, we guide you to personalized solutions that make your home safer, more functional, and comfortable. We make living easier, better, and more dignified for you and your loved ones.

In a world that often rushes people through, clients tell us it's a relief to speak to someone who truly listens. We understand what you're facing - as a client or caregiver - and we'll guide you on your journey:

From stress to relief.

From frustration to freedom.

From limited to independent.

Kitchen accessibility in the home

Functional kitchen design is important for anyone, but particularly for individuals living with the challenges of aging and disability.

BILD offers the expertise of Occupational & Physical Therapists who understand function and safety, and can assist in knowing the options for creating a beautiful and functional space.

Individualized measurements:

More important than products for any accessibility project is the importance of customizing and tailoring adaptations to your individual needs, abilities and dimensions. Any accessibility project is dependent on these details,

- Pre-construction floor plans
- Project management
- Custom kitchen and bath design
- Assistance with material selections
- Cabinetry layouts

Therefore it is of great benefit to work with an accessible design specialist knowledgeable in the aspects thereof.

Shelving and storage options:

Today, there is a great deal of storage and shelving that provides easy access to maximize use and function of space within the kitchen from a limited standpoint. Much of the pull out shelving for lower cabinets feature hardware which provides good use of space, self-closing mechanisms for ease of use, and easy-to-operate pull out and lift up options for lower and upper cabinets.

In addition to manual lowering options, there are motorized options available both for shelving as well as countertop spaces.

Countertops, cabinetry, and space planning:

Space, cabinetry, and layout are very customizable for space planning to fit individual needs and setup:

Considerations for planning your accessible kitchen remodel:

- **Understand Your Specific Needs**

- Consider how you want to use your kitchen—what you cook, how often, and any specific challenges you face

- **Layout and Space Planning**

- ***Clearances:*** Ensure ample space for maneuvering, especially for wheelchair users. Pathways should be at least 36 inches wide, with 42–48 inches recommended in work zones for easy navigation.
- ***Turning Radius:*** Plan for a turning space with a diameter of at least 59 inches (1500 mm) to allow wheelchairs to turn comfortably.
- ***Open Floor Plans:*** Favor open or U-/L-shaped layouts, which provide better access and movement throughout the kitchen.

- **Countertops and Workspaces**

- ***Height:*** Lower some countertops to 30–34 inches to accommodate wheelchair users, or consider adjustable-height counters for flexibility.
- ***Knee Clearance:*** Provide clear knee and toe space under sinks and counters for wheelchair access.
- ***Work Triangle:*** Arrange appliances (sink, stove, refrigerator) within a comfortable distance—each side between 4 and 9 feet, with a total perimeter under 26 feet for efficient movement.

- **Cabinets and Storage**

- ***Reachability:*** At least 50% of storage should be accessible from a seated position, ideally between 15 and 48 inches above the floor.
- ***Pull-Out Shelves & Drawers:*** Use pull-out shelves, sliding drawers, and turntables (Lazy Susans) to bring items within easy reach and minimize bending or stretching.
- ***Adjustable or Movable Cabinets:*** Install cabinets that can be lowered or moved for easier access.

- **Appliances and Fixtures**

- **Accessible Appliances:** Choose side-by-side refrigerators, wall-mounted ovens, and cooktops with front controls to avoid reaching over hot surfaces.
- **Smart & Adaptive Devices:** Consider appliances with smart controls (voice or app-activated) and adaptive cooking equipment for easier use.
- **Faucets and Handles:** Install lever-style faucets and easy-grip handles for those with limited dexterity.

Final Tips:

- Consult with professionals experienced in accessible design for tailored solutions.
- Involve the primary kitchen user in all planning stages to ensure the remodel meets their unique needs
- Even small modifications - like adaptive utensils or smart appliances-can make a significant difference in daily kitchen use.

Key Accessible Kitchen Features

Feature	Recommendation
Pathway Width*	36–48 inches
Counter Height*	30–34 inches (or adjustable)
Storage Height*	15–48 inches above floor for at least 50% of storage
Turning Radius*	59 inches
Appliance Access	Side-by-side fridge, wall oven, front controls
Lighting	Uniform, mix of natural and task lighting
Flooring	Non-slip, easy-to-clean

*Denotes typical measurement recommendations. Individualized measurements to be verified by BILD Accessibility Specialist.
